

Wrapsoody

eCo

Secure Collaboration

Wrapsoody eCo is an intuitive and open collaboration solution that lets you securely share, track, control and remotely expire sensitive content. Content is always protected and under your control, internally and at third parties, with traceability and audit accountability meeting today's most stringent privacy regulations.

**Disconnected
information sharing
applications hinder
compliance with
privacy regulations.**

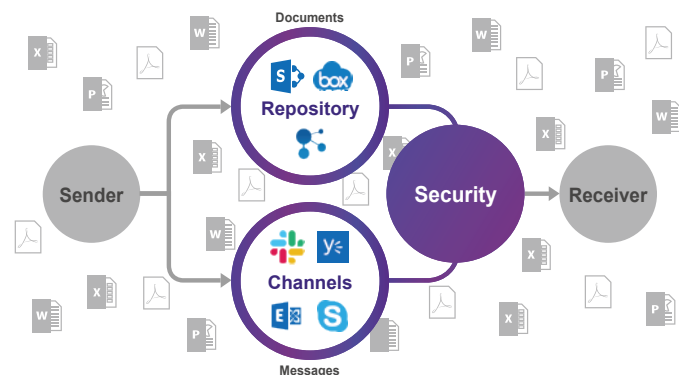

Companies collaborate with customers, partners and vendors to keep pace in today's competitive marketplace. This often requires sharing sensitive information that may be subject to privacy regulations, like GDPR, CCPA or NYDFS.

Today's solutions dictate that collaboration take place within the confines of a single vendor's portal to protect and meet privacy regulations. This hinders productivity and too often drives users to download and work outside this restrictive environment. This leaves data exposed to theft or loss, outside of your control, and breaks the traceability required by privacy regulations.

Wrapsoody eCo is the best way to securely collaborate with traceability to meet today's most stringent privacy regulations

Wrapsoody eCo is different. It doesn't restrict you to working in a specific, secure location. You can work the way you like, anywhere, with no disruption to your existing workflow. Files are always protected and are in compliance with privacy and other data security regulations.

Wrapsoody eCo simplifies secure collaboration by letting you easily share files while always maintaining control and auditability, regardless of how users work.

Protect and Share

Collaborate and Control

Audit and Comply

Wrapsody eCo controls and protects your files with smart “Pac-n-Tag” technology wherever you access or store sensitive data. We encrypt files and restrict access (Pac) to individuals you choose. A unique identifier (Tag) is embedded with the file, so it’s never out of your control and provides deep traceability for regulatory audit requirements. Access through a browser or locally simplifies collaboration. It’s all transparent with no disruption to user workflows.

Secure Collaboration

Share secure documents internally and externally, whether they are viewed in a browser, downloaded, or edited locally. Pac protects the data itself and travels with the file to endpoints, clouds and other repositories rather than restricting protection to a location.

Audit Trail

Tags travel with the file, providing deeper traceability for regulatory compliance than restricted portals or secure location-based approaches. All file derivatives, including copies with different names and formats, inherit the security and traceability of the original file.

Workgroup Access

Invite users to a workgroup that restricts access at the file level so you no longer need to manage encryption and access in a location. You can revoke access at anytime and restrict edit, print and screen capture as needed.

Virtual Content

Tag lets users securely share files once and always have the latest version anywhere and anytime, even if users make copies or change file names.

About Fasoo

Fasoo provides unstructured data security and enterprise content platforms that enable our customers to protect, control, trace and analyze critical business information while enhancing productivity. Fasoo has successfully retained our leadership position in the unstructured data security market by deploying enterprise-wide solutions for more than 2,000 organizations globally, securing more than millions of users. Fasoo is experiencing continuous improvement in its global market position, based on our unique technology, ongoing R&D and strategic approach to comprehensive product capabilities by extending our core security capabilities into content-centric collaboration, behavioral analytics and information security consulting services.
